EDUCATION

University of Houston, Houston, TX | *B.S. in Computer Science* — Expected Fall 2028
Bergen Community College, Paramus, NJ | *A.S. in Computer Science* — May 2026

PROJECTS

MoodPitch | *Next.js, TypeScript, PostgreSQL, Prisma, Stripe, Claude API*

- Designed, built, and shipped a production AI SaaS that generates client-ready business proposals in under 60 seconds.
- Architected a multi-tenant PostgreSQL schema with Prisma enforcing per-tenant data isolation; authentication via Clerk.
- Built 12+ REST endpoints for AI generation, PDF export, and the proposal lifecycle; integrated Stripe subscription billing and deployed on Vercel through a GitHub Actions CI/CD pipeline.

Email Triage Bot | *Python, Gmail API (OAuth 2.0), scikit-learn, Telegram API, GCP, systemd*

- Built a Python service that polls Gmail and UH Outlook every 15 minutes, ranks messages with sender and keyword rules plus a TF-IDF + logistic regression classifier (0.96 precision, 0.85 recall on 500 emails), and pushes alerts to Telegram.
- Applied security-first design: read-only OAuth scope, redaction of sensitive senders and ID numbers, chat-ID authentication, secrets kept out of Git and logs, and no inbound ports.
- Deployed 24/7 on a Google Cloud e2-micro VM as a non-root systemd service with auto-restart and automatic security updates.

Life OS | *Next.js, TypeScript, Supabase, PostgreSQL, Recharts*

- Built a full-stack productivity platform combining task management, habit tracking, journaling, and usage analytics.
- Enforced per-user data isolation with Supabase authentication and PostgreSQL row-level security; built a drag-and-drop Kanban board and a time-series analytics dashboard.

Wi-Fi & Internet Monitor | *MicroPython, Raspberry Pi Pico W, Adafruit IO, JavaScript*

- Wrote MicroPython firmware that measures RSSI, latency, jitter, packet loss, and uptime every 10 seconds using TCP probes and streams readings to the cloud.
- Built a backend-free static dashboard on GitHub Pages with stale-data detection that flags internet outages as "Offline."

Quantum State Reconstruction | *Python, JAX, Dynamiqs (Yale Quantum Hackathon)*

- Reconstructed quantum density matrices from measurement data using least-squares estimation and convex optimization; simulated Wigner functions and built a noise-correction pipeline from displaced parity measurements.

EXPERIENCE

Research Intern, Summer Science Scholars Program (3SP), Paramus, NJ — May 2025 – Aug 2025

- Led the software team for a high-altitude balloon payload collecting near-space meteor dust.
- Built and tested Arduino sensor firmware for data capture and logging under extreme temperature and pressure; presented results at the closing symposium.

Prompt Engineer, Outlier, Remote — Dec 2024 – Mar 2025

- Evaluated LLM outputs and annotated training data to improve factual accuracy and contextual relevance.

Academic Mentor, Sky Academy, Wayne, NJ — Sep 2024 – Jul 2026

- Mentored 6 high school students year-round through weekly sessions; organized camps for 100+ students with seminars on science and career development.

HONORS & AWARDS

- **Iranian Geometry Olympiad**: Silver Medal (2023), 1,200 participants, 10+ countries
- **Republic Mathematics Olympiad, Kazakhstan**: Bronze Medal (2022, 2023), 5,000+ national participants
- **Silk Road Mathematics Competition**: Bronze Medal (2023), 3,000 competitors, 8+ nations
- **Tuymaada International Olympiad**: Honorable Mention (2021), 2,000 students, 20+ countries

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, JavaScript, SQL, MicroPython
Web & Data: React, Next.js, Tailwind CSS, Prisma, PostgreSQL, Supabase, REST API design, scikit-learn, pandas, JAX
Tools & Cloud: Git, GitHub Actions (CI/CD), Linux, systemd, Google Cloud (Compute Engine), Vercel, Stripe, Gmail API, Arduino
AI: Claude API, prompt engineering, LLM output evaluation
Languages Spoken: Kazakh (native), Russian (fluent), English (fluent), Turkish (fluent)
